ALLOWANCE

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on March 4, 2011 has been entered.

Information Disclosure Statement

The information disclosure statement (IDS) submitted on March 4, 2011 is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner.

Allowable Subject Matter

Claims 26-48 are allowed.

The following is an examiner's statement of reasons for allowance:

Art Unit: 2437

The present invention is directed towards a method for securely processing frames in a fibre channel network. Independent claims 26, 36, and 48 each identify the uniquely distinct feature of:

- receiving a first frame at the first network entity from the second network entity in the fibre channel network, wherein the first frame is associated with a fabric login (FLOGI) or port login (PLOGI) message
- identifying a security enable parameter in the first frame, wherein the security enable parameter is used by the second network entity, when the second network entity is added to the fibre channel network, to determine if the first network entity has authentication capability or supports other security functions
- transmitting an acknowledgement to the second network entity that the first network entity has authentication capability or supports other security functions, the acknowledgement including algorithm information and a salt parameter
- receiving a second frame at the first network entity from the second network entity
- identifying a security control indicator in the second frame from the second network entity, wherein the security control indicator is used to determine if the second frame is encrypted or authenticated

Art Unit: 2437

- determining at the first network entity that a security association identifier associated with the second frame corresponds to an entry in a security database
- decrypting a first portion of the second frame by using algorithm information contained in the entry in the security database

The closest prior art, Bluemenau and Schneck disclose secure authentication of objects such as computers in a data network and an adaptive security system and method.

Nowhere do they disclose the use of a security enable parameter in a first frame to determine authentication capability accompanied by the transmission of acknowledgements regarding the authentication/security capabilities including both algorithm information and salt parameters followed by the use of security control indicators in subsequent frames, the indicators used to determine whether the frames are encrypted or authenticated in order that algorithm information may be gathered from a security database and used to decrypt the frame.

The prior art, either singularly or in combination fails to anticipate or render obvious the present invention.

Conclusion

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

Art Unit: 2437

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
